

AnglicareSA Environmental Sustainability Statement

AnglicareSA is committed to finding the best practices to be sustainable and transition our organisation to further develop and contribute to positive social environmental impacts. We respect our relationship with the environment and recognise the actions needed to promote the wellbeing and sustainability of our community today and into the future.

AnglicareSA Commits To:

- **Striving** to be a recognised as an environmentally sustainable organisation
- **Embedding** environmentally sustainable practices into the everyday services we provide to the community
- **Incorporating** and **prioritising** environmental factors into future strategic business decisions
- **Providing** educational opportunities for employees and the community to understand how consistent positive changes can lead to generational change
- **Designing** innovative energy solutions that provide the community with access to affordable and reliable clean energy sources
- **Strengthening** our organisational voice to become environmental advocates and partner with like minded organisations to shape future industry and government decisions

We are committed to developing environmentally sustainable practices, further exploring opportunities to influence, advocate and explore wider areas, both internally and externally. Our immediate and initial focus will be:

Energy

- New designs for construction and renovation to adhere to industry recognised energy benchmarking standards
- Transition corporate fleet to the most effective and affordable green energy vehicle alternatives
- Invest in renewable energy across our operations and housing properties
- Incorporate environmental impact considerations during the procurement tender process
- Allocate capital to invest in upgrades that maximise the efficiency of energy-consuming assets

Waste

- Integrate waste classification systems and provide supporting educational opportunities for environmentally sustainable practices
- Invest in paperless systems and cloud-based hosting platforms to reduce paper use across the organisation
- Switch to reusable and recyclable materials where possible in our daily operations
- Challenge our supply chain to reduce the volume of wastage in their production processes

Water

- Identify inefficient water consumption practices and implement better solutions
- Capital investment decisions to be guided by maximum efficiency of water consumption
- Consider alternate uses of grey water that result in positive outcomes for the local surroundings
